ABOUT ME

I am a full stack developer originally from India with almost 4 years of experience in developing NodeJS applications using MEAN stack. Currently working on an online HTML5 banner maker application using Angular, ReactJS, NodeJS & MongoDB. I am responsible for managing multiple NodeJS micro-services & developing front-end using Angular 5 and ReactJS components. After working in India for 3 years in C#.NET framework, I came to UK to pursue Masters. I worked in a Preston based startup while studying & got sponsored after securing Masters degree. I am a passionate and enthusiastic person with keen interest in learning & sharpening new skills. A big fan of test driven development and agile methodology. Active user of stackoverflow, GitHub & npm communities. I have also worked on Java, Python & Android as a part of educational & hobby projects. My hobbies involve astronomy, cricket, snooker, ping-pong, chess & playing flute.
